# FOOTWEAR

## METATARSAL BUTTON

This carefully placed ,contoured soft raised button helps spread your big toe from the rest of them greatly improving your forefoot function and comfort- vital in cycling with so much pressure coming through this area of the foot and preventing unwanted scrunching of the toes

## POWER ARCH

Carefully profiled and contoured support helps the arch of your foot to cope better with the conflicting demands of walking and cycling placed upon it and deliver better power transfer and more comfort

## SOLE STIMULANT

These small raised soft tactile dots are strategically placed to improve your foots proprioception greatly improving its ability to soften and stiffen as and when it needs too through co-ordinated muscular contractions

### MT500 BURNER CLIPLESS WATERPROOF SHOE

Waterproof Trail Shoe, for the Clipless Rider

Highly durable upper fabrics with fully Waterproof, highly breathable ExoshellFW™ membrane  
EGM footbed maximises comfort and power transfer  
StickyFoot™ Grip pedal contact areas provide great connection with caged and clipless pedals  
Toe and heel sections deploy StickyFoot™ Dura in an aggressive tread pattern to provide superb walking grip and durability  
Offset cleat box with increased longitudinal adjustment provides a wide range of stance option for caged or traditional clipless pedals  
Flex profile balances stiffness and flex for power transfer and control  
Speed Lace system with waterproof cover to keep mud and spray out  
Velcro® strap locks your feet and lace in place  
Sharkskin fabric lined heel cup helps hold foot in place

LIGHT  
REACTIVE

Reactive lenses use photochromic technology to adapt to changeable light conditions often experienced on long rides.

The Anti-fog coating on the inside of the lens reduces the misting effect of warm perspiration which can often be an issue when working hard or stopping and starting on the bike.

HYDRO  
PHOBIC

Hydrophobic finish helps lenses repel water and spray, helping with vision clarity in wet conditions.

To cater for the widest variety of light conditions removable lens sets offer options covering categorier 1 to 3 for everything from sunny days to post sunset night rides.

Increase airflow achieved through lens venting helps reduce steaming up of the inside of the lens when working hard or in damp conditions

## EXOSHELL 60SL

In the constant quest for the ultimate lightweight waterproof Endura bring the new Exoshell60SL into the mix. A feather light 3 layer construction delivers unbelievably high breathability ratings and an incredibly small pack size. This fabric transforms the "just in case" back pocket shell jacket in to something that can be worn all day in even the harshest conditions.

## EXOSHELL 20

With an extremely soft, noise free outer face fabric and a superfine denier tricot inner layer sandwiching the thin PU membrane, ExoShell20™ exceeds expectations of comfort and performance. The 10,000mm waterproof rating ensures water doesn't get in and a best in class breathability of 20,000g/m2/24hr keeps you dry from the inside.

## EXOSHELL 30DR

The fabric at the heart of the killer new MT500 waterproof collection carefully balances massive breathability with exceptional waterproofing. A new, improved PFC free DWR treatment provides exceptional water repellency, while ensuring the only trace you will leave on the mountain is the track from your tyres.

Designed specifically for all day trail and mountain riding the 3-layer laminated construction hits the sweet spot between weight, packability and durability. A super tough, durable Nylon outer protects the superfine fluorine free membrane while the soft touch mesh inner face provides comfort and exceptional wicking to keep you dry from the inside.

## PRIMALOFT®

Engineered for your comfort.

Now found in over 20 Endura products.

PRIMALOFT.

## EXOSHELL 40

Using an innovative 3 layer construction and weighing in at only 70gsm ExoShell40™ delivers a formidable combination of minimal pack size, immense breathability and high durability. The key to the ExoShell40™'s impressive breathability rating of 40,000g/m2/24hr and waterproof rating of 20,000mm lies in the ultrafine, fluorine free membrane which is up to 50% thinner than standard membranes, protected by a super-fine denier tricot laminate and impregnated with a proprietary compound enhancing moisture transfer.

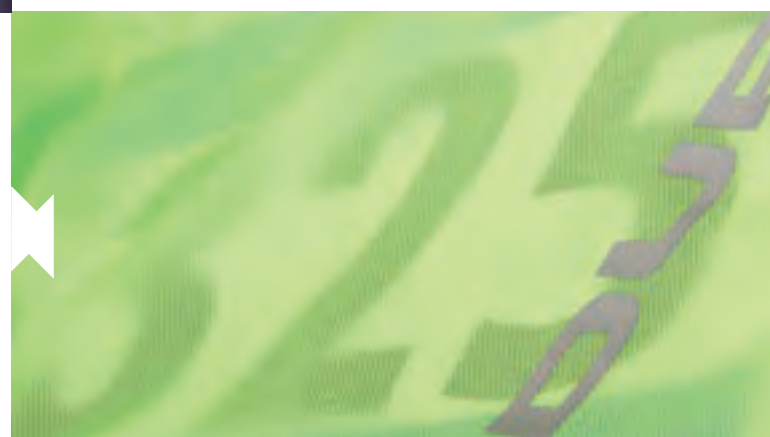

## EXOSHELL 25ST

For high stretch, wind and waterproof comfort the ExoStretch25ST™ is hard to beat. A bonded softshell delivering exceptional breathability performance of 25,000g/m2/24hrs provides an unbelievable combination of flap free, athletic jersey fit and waterproof jacket protection. Developed with Movistar Team, ridden in the harshest conditions by the world's best riders, ExoStretch25ST™ 's credentials are thoroughly proven.

## EXOSHELL 20ST

Developed with racing in mind, the translucent properties of ExoShell20ST™ mean that we'll always have your number, no matter how bad the weather. By virtue of a high denier mesh construction, it is a supremely light-weight and packable fabric that makes for rapid deployment and micro pack size when not required while built in stretch ensures a true race fit- the perfect year round jersey pocket companion.

800 SERIES PAD

The 800 Series pad brings the medical grade silicone elastomer, used in prosthetics, and introduced to the cycling world in the women's 800 series pad into the men's pad line up. The addition of the perforated elastomer layer to the multi density foam CVP construction delivers considerably higher levels of support through key pressure areas and ensures the pad doesn't "bottom out".

MEN'S 550 SERIES MTB

The demands of mountain biking on a pad are very different to those on the road, with less time generally spent in the saddle and more freedom of movement required. The 550 Series MTB pad was specifically developed to meet these demands, with a smaller footprint, highly flexible, multi-density construction and a super soft, cool touch fabric topsheet. This pad features Endura's DisperseFoam™ which provides superior drying and dramatically improved air permeability compared to regular foams which is especially important when worn under a baggy short which can lead to excessive heat build-up.

MEN'S 1000 SERIES AERO PAD

The 1000 series Italian stretch pad features Continuously Variable Profile (CVP) technology. Unlike traditional layered pads, this avoids clunky steps in pad thickness. TRS perforated foam "dermis" layer positioned under the face for improved blood flow and dryness especially on longer rides. The BioCeramic® high stretch, fast wicking face fabric incorporates a permanent antibacterial finish, completing one of the most advanced pads in existence. The "Aero" version of the pad, used in the D2Z® Roadsuit and Encapsulator Suit™ is specially shaped to suit to the more aggressive riding position.

MEN'S 400 SERIES GEL

Moulded stretch pad in a plush microfibre face fabric for luxurious comfort with strategically positioned gel inserts. Maximum thickness of 15mm with antibacterial and wicking finish and dimpled structure to improve comfort on pressure points.

MEN'S 600 SERIES GEL

The updated 600 series Italian stretch pad features Continuously Variable Profile (CVP) technology and is sculpted from a single block of foam, with gel inserts for extra comfort. A TRS perforated foam 'dermis' layer is positioned under the face for improved blood-flow and wicking especially on longer rides. Super-soft fast-wicking microfibre face fabric. Front mesh panel improves air circulation and anatomic 3D shape.

MEN'S 300 SERIES

Moulded stretch pad in a plush microfibre face fabric for excellent comfort. The pad has a maximum thickness of 12mm and features antibacterial and wicking finish with dimpled structure to improve comfort on pressure points.

MEN'S 500 SERIES

If you are riding in hot climate zones, temperature regulation is the most critical challenge. The pad is one of the key areas where heat build-up can cause core body temperatures to rise adversely. The new Endura 500 series pad used in the Xtract Lite collection tackles the problem head-on, incorporating a new generation of water expelling foams. DisperseFoam™, a global exclusive for Endura, features a disruptive foam cell construction which provides superior drying and dramatically improved air permeability compared to conventional PU foams. The smooth, Continuously Variable Profile and high stretch properties reduce the risk of chafing, ensuring comfort in the saddle. It also features a silver yarn fabric with cool touch, rapid drying and permanent antibacterial properties.

MEN'S 200 SERIES

Moulded pad in a comfort-wick fabric which transports moisture rapidly to keep the skin dry. This compact pad is 9mm maximum thickness with antibacterial finish and dimpled structure to improve comfort on pressure points.

MEN'S QDC TRI SERIES

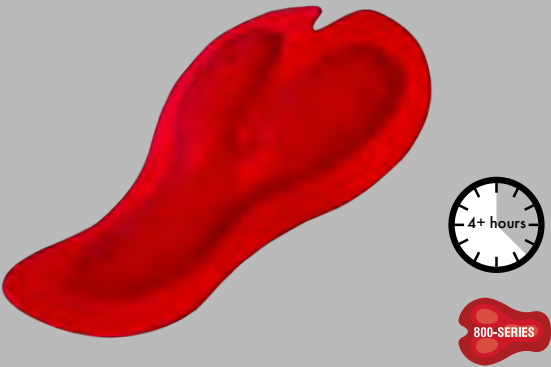

Designed to meet the needs of the world's top professional long distance triathletes the QDC Tri pad features Endura's exclusive water expelling DisperseFoam™ technology and a water repellent top sheet for incredible swim to bike comfort. The minimal padding is shaped in a smooth Continuously Variable Profile ensuring optimal support on the bike and minimal impact on the run.

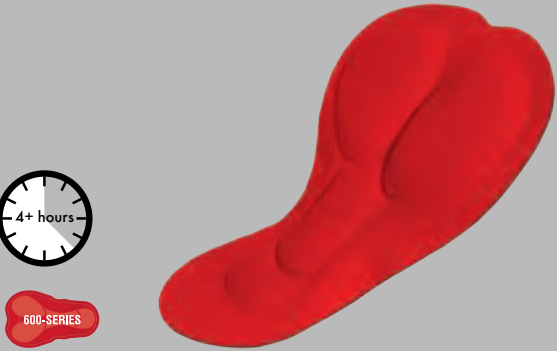

WOMEN’S 800 SERIES CONFORM PAD

The Women’s 800 Series Conform Pad employs a taboo busting philosophy to tackle head on the pain and injury often experienced by female cyclists when sitting on a saddle. Medical grade elastomer, as used in prosthetics, is used to protect key areas. It is much more effective at dissipating pressure than foam or traditional PU gels, thereby protecting the skin and underlying soft tissue. Game changing comfort is achieved via this novel application where the medical grade elastomer in a liquid form is combined with Endura’s continuous variable profile (CVP) pads creating a seamless interface between elastomer and foam.

WOMEN’S 300 SERIES MINI

Ergonomically designed to mould to the female form, this moulded stretch pad in a plush microfibre face fabric offers a high level of comfort. This 12mm thick pad incorporates antibacterial and wicking finish making it well suited to medium length rides.

WOMEN’S 600 SERIES

Ergonomically designed to mould to the female form, this Italian 3D multi density stretch pad incorporates Silver Dry® antibacterial technology for enhanced hygiene. Multidensity foam construction with gel inserts provide excellent comfort for endurance riding.

WOMEN’S 200 SERIES

Ergonomically designed to mould to the female form, this moulded pad in a comfort-wick fabric transports moisture rapidly to keep the skin dry. This is a compact pad of 8mm maximum thickness with antibacterial finish making it ideal for short to medium length rides of 1-2 hrs.

WOMEN’S 500 SERIES

If you are riding in hot climate zones, temperature regulation is the most critical challenge. The pad is one of the key areas where heat build-up can cause core body temperatures to rise adversely. The new Endura 500 series pad used in the Xtract Lite collection tackles the problem head-on, incorporating a new generation of water expelling foams. DisperseFoam™, a global exclusive for Endura, features a disruptive foam cell construction which provides superior drying and dramatically improved air permeability compared to conventional PU foams. The smooth, Continuously Variable Profile and high stretch properties reduce the risk of chafing, ensuring comfort in the saddle. It also features a silver yarn fabric with cool touch, rapid drying and permanent antibacterial properties.

WOMEN’S QDC TRI SERIES

Designed to meet the needs of the world’s top professional long distance triathletes the QDC Tri pad features Endura’s exclusive water expelling DisperseFoam™ technology and a water repellent top sheet for incredible swim to bike comfort. The minimal padding is shaped in a smooth Continuously Variable Profile ensuring optimal support on the bike and minimal impact on the run.

WOMEN’S 400 SERIES GEL

Ergonomically designed to mould to the female form, this moulded pad in a plush microfibre face fabric offers luxurious comfort with strategically positioned Gel inserts. Maximum thickness of 15mm with antibacterial and wicking finish.

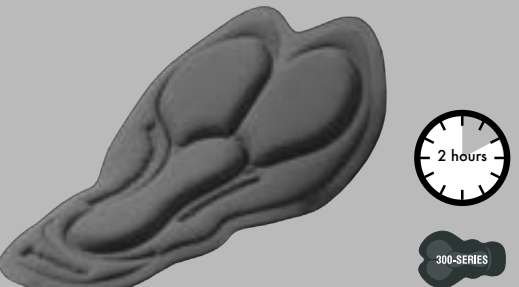

KID’S 400 SERIES GEL

Moulded stretch pad in a plush microfibre face fabric for luxurious comfort with strategically positioned gel inserts and antibacterial finish.

WOMEN’S 300 SERIES

Ergonomically designed to mould to the female form, this moulded stretch pad in a plush microfibre face fabric offers a high level of comfort. This 12mm thick pad incorporates antibacterial and wicking finish making it well suited to medium length rides.
